

Rufus Reid

Groove
and
Pulse

DOUBLE BASS

About the Course

In this lesson, Rufus Reid takes us on a walkthrough of how groove and pulse are the fundamental tools to make our listeners' bodies gyrate in some way - moving the head, tapping the foot, or even just rocking back and forth. He discusses use of different dynamics, rhythms, phrasing, and strategies for bridging the gap between high and low registers in a musical manner.

Contents

Pulse – pg. 3

Rhythm Changes in “I Got Rhythm” – pg. 4

“Autumn Leaves” – pg. 5

Tenths for Register Changes – pg. 6

If you have any corrections, comments, or critiques relating to this workbook, please send them to marek@tonebase.co. We strive to deliver the highest quality enrichment experience.

Thank you!

In this lesson, Rufus Reid walks us through groove and pulse. These are the fundamental tools to make our listeners' bodies gyrate in some way: moving the head, tapping the foot, or rocking back and forth.

Pulse

The pulse isn't just the tempo (1, 2, 3, 4) but the larger picture of where we feel — and move to — the “big beats” of the music. Rufus takes us through some strategies to make the bass line come alive.

- Dynamics
- Different rhythms or rhythm changes
- Attention to cadences, showing phrasing towards or away from them.

“You don't just get to F, you MOVE to F, with energy.”

That helps the groove have forward motion, not just a static line. We can think of it as having “intention” towards a goal part of the line.

Rhythm Changes in “I Got Rhythm”

This does not sound like a blues tune; it has its own sound. The chord progression is I-vi-ii-V-I. You have to know what this sounds like, away from the bass. Maybe you'll have to play this 100 times before you fully have this in your head. Once you have the sound, you can make a nice bass line.

- Put the bass down, and write out your bass line with chord symbols over the notes.
- Then pick up your bass and try it out.
- If it doesn't sound good, use your eraser!
- Change it until it satisfies you.

Handwritten musical notation for the bass line of "I Got Rhythm" in B-flat major, 4/4 time. The notation is divided into four systems, each with a bass staff and chord symbols above. The first system is labeled 'A' and the second 'A1'. The chord progression follows the I-vi-ii-V-I pattern: Bb (I), Gmi7 (vi), Cmi7 (ii), F7 (V), and Bb (I). The notation includes various bass line variations and accidentals.

“There is no perfect bass line. If there was such a thing, why would anyone need to study? And why would anybody need to listen to anything? That’s the wonderful thing about playing jazz: it’ll never be perfect.”

“Autumn Leaves”

This is a classic tune. Rufus takes us through the “big letter” chord changes and builds a bass line.

The structure is:

- A (8 measures);
- A (8 measures);
- B (8 measures);
- C (similar to the A).

Handwritten musical score for "Autumn Leaves" in bass clef, 4/4 time. The score consists of six staves. The first staff is labeled 'A' and contains four measures with chords Cmi7, F7, BbΔ, and EbΔ. The second staff contains four measures with chords Aø, D7(#9), Gmi7, and a final measure with a bass line. The third staff is labeled 'A¹' and contains four measures with chords Cmi7, F7, BbΔ, and EbΔ. The fourth staff contains four measures with chords Aø, D7(#9), Gmi7, and a final measure with a bass line. The fifth staff is labeled 'B' and contains four measures with chords Aø, D7(#9), Gmi7, and a final measure with a bass line. The sixth staff contains four measures with chords Cmi7, F7, BbΔ, and EbΔ.

The basic structure is a good place to start, then add some simple rhythmical variations. These don't need to be flashy!

- Examples are syncopations, tuplets, or simple anticipations (pushes) of a chord change.

"Understanding the resolutions of chords, that's what we do. We settle the music, and people will come to you. If you have a good pulse and you played these notes that actually do function well with this song, and it's proved because you can do it at the piano, the band will sound better. Guarantee!. But if you don't have a good pulse, people won't want to play with you."

Tenths for Register Changes

Rufus demonstrates an exercise using tenths (for instance, between the open E and G string) to transition between a low and high register to create a bass line. Rufus simply likes the sound of that interval! Getting used to that sound and the shape of the hand allows you to add that into your bass lines and create a line that can bridge wide registers.

"Whatever songs you like, I need you to sing them, then play them on your bass! Nobody said you couldn't."
